Technical Requirements

Little or no hardware will be needed as DriverPass desired a fully cloud based environment. Servers and databases will be used from cloud based platforms, so internet will be required for any employee or customer to access the system. These cloud services will introduce their own limitations on the system such as limited API calls, restrictions based on payment plan, traffic limits, etc. Security is another service that will be employed on the cloud but this may be limited by compatibility with the other services. The Internet will be the biggest requirement for any user while a reliance on cloud services will place limitations on the system's capabilities.
